SJVAPCD RULE 4320 UPDATE

FACT: The Authority to Construct (ATC) deadline date for boilers > 20 MMBtu/hr with the standard schedule option of 7 ppm NOx is July 1, 2009. The deadline date for boilers > 20 MMBtu/hr with the enhanced schedule option of 5 ppm NOx is January 1, 2013.

FACT: In the long term, air emission regulations in the San Joaquin Valley may change. If this occurs boilers performing at 7 ppm NOx may need to be upgraded with new equipment in order to be in compliance with new regulations.

FACT: NOx levels of less than 5 ppm are predicted after 2015. The enhanced option with selective catalytic reduction (SCR) technology helps ensure that your equipment will be "future compliance ready".

FACT: The CataStak™ Selective Catalytic Reduction (SCR) System will easily meet less than 5 ppm NOx and is proven to perform as low as 2.5 ppm NOx.

Nationwide Boiler has a long history of evaluating low NOx solutions. With the largest low NOx rental boiler fleet in the industry and as the largest supplier of rental boilers to users in California, we select only the most cost effective and energy efficient solutions.

We want you to select a wise compliance decision too. Why spend your compliance dollars now on technology that may need to be replaced in the near future? Choose the enhanced option and put off your capital spending for four years towards a solution that will remain in compliance year-after-year. And, for a solution that works, choose the CataStak SCR System. With over 60 successful installations, it not only meets strict long-term performance criteria, but also provides a positive return on your investment.

Read our latest case study, *Future NOx Compliance: Burners vs. SCRs*, and learn more about our long-term compliance strategy with the CataStak SCR System. Let Nationwide Boiler provide you with the peace of mind you deserve.
